

Clear thinking in a complex world

ICM Poll for The Guardian

Fieldwork dates: 127th-29th May 2016

Interview Method: Telephone, and separately online.

Population effectively sampled: All adults aged 18+

Phone Sampling Method, RDD: Within each government office region, a random sample of telephone numbers was drawn from the entire BT database of domestic telephone numbers. Each number so selected had its last digit randomised so as to provide a sample including both listed and unlisted numbers.

Phone Sampling Method, Mobile RDD: A random sample of mobile telephone numbers was generated in proportion to network provider market share. As with the landline process, seed telephone numbers are used to create the mobile RDD sample by randomising the last N digits of the seed number.

Phone Sample size: 1,004

Online Sampling Method: A nationally representative sample was selected a random from the NewVistatm panel of 200,000+ adults, with sample selected in proportion to population distribution.

Sample size: 2052 adults aged 18+

Data weighting: In both cases, data were weighted to the profile of all adults aged 18+. Data were weighted by sex, age, social class, household tenure, work status and region. Targets for the weighted data were derived from the National Readership survey, a random probability survey comprising 36,000 random face-to-face interviews conducted annually.

The data were further weighted by declared votes in the 2015 general election. The weighting scheme is designed as follows:

Weighting by past votes - phone

1. Respondents are asked whether they voted in the last general election (2015) and if they did, which party they voted for.

2. The sample is weighted by demographics (age, sex, tenure etc). However, after such weighting the declared past votes may not match, exactly, the results of the last election. Partly this is because demographics (by which ICM control the sample) are relatively poorly correlated with vote behaviour. Nevertheless past vote weighting has to be used with caution as some people genuinely forget how they voted.

3. ICM takes the declared past votes on any new poll and adds it to the most recent ICM polls containing the same question. The average of these polls is used in the past vote weighting scheme. (Polls conducted just after the 2015 General Election will obviously rely on only those polls that have been conducted).

4. ICM compares the declared past votes derived in 3) above to the actual result of the last general election and gives a weight of 80% to the results of the last election and 20% to the average of the most recent polls, thereby assuming that most of the difference can be attributed to political imbalance in the sample and to faulty recall.

Weighting by past votes – online

The sample were fully weighted to the 2015 General Election result. Recall on online tests has been superior to that achieved over the telephone, and given the resultant minimal impact of past weight voting online, making provision for faulty recall seems unnecessary.

Weighting by time of interview – online

ICM weighted our online sample to offset apparent disproportional ability to respond to the survey close to survey invite release. Our invites were staggered over the full weekend and a weight was applied to reflect the more representative nature of survey respondents responding later in the open period of response.

Weighting for turnout – both phone and online

1. ICM ask respondents to say how likely it is that they will go and vote in a new general election using a ten points scale where 10 means they would be absolutely certain to vote and 1 means they would be certain not to vote.

2. We then weight people by their anticipated turnout. If someone is 10/10 certain to vote, they are given a weight of 1.0. If someone is 9/10 certain to vote they are given a weight of 0.9 etc. People who tell us they are likely to vote in the next General Election but did not vote in the last, are further down-weighted. If someone says they are 10/10 certain to vote but did not vote in 2010, they are given a weight of 0.5. If they say 9/10 certainty, the weight becomes 0.45 etc.

Voting intentions – both phone and online: ICM derives vote intentions from 2 questions.

First of all respondents are asked how likely it is that they would be to go and vote in a new election. Those who say they will vote are asked to say which party they would support in a new election. Respondents are then asked whether they voted in 2015 and which party they voted for in that election.

The vote figures shown in the tables are calculated after ICM has excluded those who say they will not vote, refuse to answer the question or don't know who they would vote for (but see below).

Adjustment process 1: 'Partial Refuser' Reallocation

- A.) 75% of 2015 Conservative and Labour voters who refuse to answer the vote intention question or say they don't know, are added back to the party they voted for in 2015.
- B.) 50% of 2015 voters for all other parties who refuse to answer the vote intention question or say they don't know, are added back to the party they voted for in 2015.

Adjustment process 2: 'Total Refuser' Reallocation

'Total refusers' are people who refuse/DK their future vote intention AND also refuse/DK who they voted for in the previous General Election (2015). Given the lack of any political information about such respondents to date, ICM has excluded them from the vote intention figures. However, our post-2015 Recall Survey revealed that Total Refusers (who were subsequently willing to tell us what they did in the 2015 General Election) split disproportionately across different parties. Indeed, one important observation was that more than half of all Total Refusers actually voted Conservative, with more than twice as many voting Conservative than Labour.

Our new adjustment thus reallocates some Total Refusers back into the poll sample. This is achieved in the following way:

1. The number of Total Refusers on any poll is multiplied by the proportion of Partial Refusers who were (already) re-allocated in Adjustment Process 1. (For example, if 60% of Partial Refusers were added back, then 60% of Total Refusals will be added back).
2. Total Refusers are then multiplied by each party's share of reallocated Partial Refusers. (For example, if 40% of already allocated Partial Refusals were 2015 Conservative voters, then 40% of remaining Total Refusals will be reallocated to the Conservatives).
3. ICM's default position is that Total Refusers *at least* look like Partial Refusers in terms of political make-up. However, given the findings of our Recall Poll, we believe that Total Refusals are probably even more pro-Conservative than pro-Labour. In order to allow for this, the share of Total Refusals added back to the Conservatives is increased by 20% (for example, from the 40% mentioned in (2, above) to 60%), with a corresponding reduction of 20% in the share of Total Refuser reallocation to Labour.

Our expectation is that the combined effects of Adjustments 1 +2 as described above will have the net effect of adding c.1-2 percentage points vote share to the Conservatives, and reduce the Labour vote share by c.0-1 percentage points compared to the pre-2015 ICM adjustment process.

Questions: The computer tables attached in PDF format show each question, in full, in the order they were put to respondents, all response codes and the weighted and un-weighted bases for all demographics and other data including but not limited that published .

Table 3

Data derived from:-

Q.A Some people have said they would not vote in a new General Election, while others have said they would vote. I would like to know how certain it is that you would actually vote in a general election?

Q.B The Conservatives, Labour, the Liberal Democrats and other parties would fight a new election in your area. If there were a general election tomorrow which party do you think you would vote for?

Data excludes those who definitely will not vote (8%), don't know who they would vote for (11%) or refuse to answer (6%)

Table 5

Q.1 The referendum on the UK's membership of the European Union will take place on June 23rd. Many people we have spoken to will not vote in that referendum, while others will vote. How certain is it that you would actually vote in the EU referendum on June 23rd? On a ten point scale if 10 would mean you would be absolutely certain to vote and 1 would mean you would be certain not to vote, how likely is it that you will cast your vote?

QA. Some people have said they would not vote in a new General Election, while others have said they would vote. How certain is it that you would actually vote in a general election if it were to be held tomorrow? On a ten point scale where 10 means you would be absolutely certain to vote and 1 means you would be certain not to vote, how likely is it that you would cast your vote?

Table 4

Data derived from:-

Q.A Some people have said they would not vote in a new General Election, while others have said they would vote. How certain is it that you would actually vote in a general election if it were to be held tomorrow? On a ten point scale where 10 means you would be absolutely certain to vote and 1 means you would be certain not to vote how likely is it that you would cast your vote?

Q.B The Conservatives, Labour, the Liberal Democrats, UKIP, and other parties would fight a new General Election in your area. If there were a General Election tomorrow which party do you think you would vote for?

Data excludes those who definitely will not vote (3%), don't know who they would vote for (15%) or refuse to answer (1%)

THIS TABLE DOES NOT INCLUDE ADJUSTMENT FOR DON'T KNOW/REFUSERS

Table 6
Q101. The referendum on the UK's membership of the European Union will take place on June 23rd.
Many people we have spoken to have told us that they will not vote in the referendum, while others will vote. How certain it is that you would actually vote in the EU referendum on June 23rd?
On a ten point scale, 10 would mean you would be absolutely certain to vote and 1 would mean you would be certain not to vote, how likely is it that you will cast your vote?
Base: All respondents
